

TABLE OF CONTENTS

Introduction	9
The history of 18K360 turbine modernization	9
Dynamics problems of 18K360 turbines after LP parts retrofit	12
Book contents	15
1. Free vibration of bladed disc	17
1.1. Model description	19
1.2. Free vibration of single blade-experimental set up	20
1.3. Natural frequencies of single blade and bladed disc	22
1.4. 0.5 Hz of bladed disc mistuning	25
Conclusions	28
References	28
2. Forced vibration of bladed discs	29
2.1. Material bladed disc mistuning – pattern I (0.5 Hz)	33
2.2. Geometrical bladed disc mistuning – pattern II (3 Hz – with feathering)	36
2.3. Material bladed disc mistuning – pattern II (3 Hz – with feathering)	40
2.4. Geometrical bladed disc mistuning – pattern III (3 Hz – with feathering)	42
Conclusions	45
References	45
3. Multistage coupling	47
3.1. Material bladed disc mistuning – pattern I (0.5 Hz)	49
3.2. Geometrical bladed disc mistuning – pattern I (0.5 Hz)	50
3.3. Tuned and mistuned bladed discs on LP rotor	52
Conclusions	60
References	60
4. Thermodynamic calculations of turbine steam parameters	61
4.1. Introduction	61
4.2. Turbine fluid-flow calculations for nominal cycle parameters	61

4.3. Heat and flow calculations of the cycle and turbines at the various work conditions.....	75
4.4. Detailed calculation of the last turbine stage	85
4.5. Comparison of results of calculations with experiment and final conclusions.....	86
References	91
Nomenclature	91
5. Unsteady forces acting on rotor blades	95
5.1. Unsteady forces in rotating and non vibrating rotor blades with exhaust hood-nominal condition	95
5.1.1. CFD model.....	97
5.1.2. Flow analysis	98
5.1.3. Unsteady forces.....	105
Conclusions	113
References	114
5.2. Unsteady forces acting on rotating and vibrating rotor blades without exhaust hood	116
5.2.1. Aeroelastic model	116
5.2.2. Numerical results	121
Conclusions	125
References	126
5.3. Unsteady rotor blade forces with exhaust hood and vibrating blades for nominal regime	127
5.3.1. Aeroelastic model	127
5.3.2. Numerical results	131
Conclusions	136
5.4. Unsteady rotor blade forces with exhaust hood and vibrating blades for non-nominal regimes	137
5.4.1. Aeroelastic and structure model	137
5.4.2. Unsteady blade forces – regime 2	138
5.4.3. Unsteady blade forces – regime 3	142
5.4.4. Unsteady blade forces – regime 4.....	145
5.4.5. Unsteady blade forces – regime 5.....	149
Conclusions	153
References	154

6. Flutter of rotor blades	155
6.1. Flutter analysis for uniform pressure distribution behind rotor blades ..	155
6.1.1. Aeroelastic model	155
6.1.2. Structural model.....	156
6.1.3. Aeroelastic analysis	157
Conclusions	171
References	172
6.2. Flutter analysis for non-uniform pressure distribution behind rotor blades	173
6.2.1. Aeroelastic and structure model	173
6.2.2. Aeroelastic analysis	174
Conclusions	181
7. Experimental analysis of rotor blades in vacuum chamber	183
7.1. Blade vibration measurement.....	183
7.2. Forced vibration of individual blades.....	184
7.3. Synchronous vibration	186
7.4. Circumferential least squares fit.....	188
7.5. Single blade frequency spectrum	189
7.6. All-blade frequency spectrum.....	190
7.7. Spin facility preparation for testing.....	192
7.8. Blade vibration analysis	196
Conclusions	202
References	202
8. Monitoring of blade vibration in a steam turbine power station	205
8.1. Testing methodology.....	205
8.2. Instrumentation installation.....	208
8.3. Blade vibration in nominal conditions	218
8.4. Crossing of M1 EO3 resonance	220
8.5. Vacuum breaking in the condenser	224
8.6. Durability of BTT sensors.....	227
8.7. Blade vibration monitoring system concept.....	233
8.7.1. FPGA target	236
8.7.2. RT host software.....	236
8.7.3. PC host software	238

8.7.4. Controller data processing	238
References	239
9. Tip-timing rotor blade aliasing vibration simulator of steam turbine ...	241
9.1. Tip-timing simulator	242
9.2. Analysis of blade vibration using tip-timing technique	243
9.3. Rotor blade simulator up to 25 Hz	247
Conclusions	253
References	253
10. Modernization of LP steam turbine last stage	255
10.1. Modified Benedict-Webb-Rubin equation of state	255
10.1.1. Modified Benedict-Webb-Rubin equation of state with 32 terms. Basic thermodynamic functions.....	256
10.1.2. Method of interpolation-analytical approximation of the thermodynamic functions	262
10.1.3. Determination of terms for the equation of state	263
10.1.4. Calculation of the low-pressure part of a 18K360 steam turbine	264
Conclusions	270
Nomenclature	270
References	270
10.2. Modernization algorithm.....	272
10.2.1. Building of blade 3D geometry.....	273
10.2.2. 3D flow calculation method	276
References	279
10.3. Modernization of the last stage	281
Conclusions	291
Summary	293
